CourseDekhlo

■ EXCLUSIVE BONUSES

For CourseDekhlo Readers

A practical mini-guide to planning, prompting, and creating AI videos more effectively.

BONUS 1 • Start with Gemini and ChatGPT

You can begin your AI content journey with tools such as **Gemini and ChatGPT** for brainstorming, writing scripts, refining prompts, and exploring image or video creation. They may be enough for many beginner content needs—though the best tool depends on your project, access, and the features currently available.

BONUS 2 • Check eligible Jio offers

Some Jio plans or promotions may include access to premium Gemini features. **Do not assume it is included with every recharge.** Check the current Jio offer, eligibility, activation steps, duration, and renewal terms before recharging.

BONUS 3 • Plan before you spend AI credits

Before generating a video, decide what you want to create. Define the subject, scene, action, visual style, camera movement, lighting, mood, duration, aspect ratio, and any must-keep details. Clear instructions can reduce avoidable retries and help you use credits more efficiently—but AI outputs still need review and iteration.

BONUS 4 • Review the output and correct mistakes

AI-generated videos can contain visual glitches, inconsistent characters, incorrect movement, or unexpected details. Don’t accept the first output automatically. Check each scene, improve the prompt, regenerate or edit when needed, and keep refining. Strong prompting helps, but it does **not guarantee a perfect video**.

CourseDekhlo Bonus • Choose the Right Video Format

When creating a video in Gemini, open the video-generation option and select the aspect ratio that suits where you plan to publish. The available choices can vary by product version, account, or feature rollout.

Aspect ratio	Best suited for	Typical use
9:16 (Vertical)	Short-form mobile video	Instagram Reels, YouTube Shorts, TikTok-style content
16:9 (Landscape)	Wide-screen video	YouTube videos, presentations, website embeds
1:1 (Square)	Square social posts	Feed posts and square creative (if offered)

Quick Prompt Checklist

Before you click Generate, specify:

- Subject / character: who or what is in the video?
- Scene and action: what happens, and where?
- Style and mood: realistic, cinematic, educational, playful, etc.
- Camera: shot type, angle, movement (if important)
- Lighting and visual details
- Duration and aspect ratio (when options are available)
- Consistency requirements: describe character features, clothing, and setting clearly
- Constraints: what should not appear or change

Copy-and-Use Prompt Template

Prompt Template • Customize the brackets

Create a video for [platform / purpose].
Subject: [describe the person, object, or character]
Scene: [location and background]
Action: [describe the action in clear sequence]
Visual style: [realistic / cinematic / animation / other]
Camera: [shot type, angle, movement]
Lighting & mood: [details]
Format: [9:16 vertical / 16:9 landscape / other available ratio]
Character consistency: Keep [key appearance details] consistent throughout the scene.
Important constraints: Avoid [unwanted elements / errors].
Generate a coherent result. I will review it and refine the prompt if needed.

A CourseDekhlo reminder

Clear prompt → **generate** → **review** → **refine.** AI tools can speed up content creation, but your creative direction and quality checks remain important. Tool features, free access, paid plans, and promotional offers may change; verify current terms before relying on them.
